

Create a static pod named static-busybox that uses the busybox image and the command sleep 1000

```
kubect1 run --restart=Never --image=busybox static-busybox --dry-run -o yaml --command -- sleep 1000 > /etc/kubernetes/manifests/static-busybox.yaml
```

Use JSON PATHquery to retrieve the osImages of all the nodes and store it in a file /opt/outputs/nodes_os_x43kj56.txt

```
kubect1 get nodes -o jsonpath='{.items[*].status.nodeInfo.osImage}' > /opt/outputs/nodes_os_x43kj56.txt
```
